

How to load and enjoy your new Boxxle!

Open Boxxle by pressing the lid release button. Then preload lifting mechanism by pushing down on the lift plate, until it locks into place.

Prepare your favorite Bag-in-Box wine by removing the interior bag from cardboard box. Twist spigot 180°. With other hand, hold back the interior plastic ring when inserting, to prevent damage to wine bag when closing lid.

Align bag so that the spigot is in the front of the cavity and slide it neatly into the slot. At this point the spigot on the bag's tap should be pointing downward.

Close Boxxle lid snugly, applying pressure for a moment longer after you hear the click, and enjoy your beverage from an elegant and convenient service height...at the table, on the countertop, or on the go.

Boxxle was designed to work with all known 3 Liter Bag-in-Box bags and spigots, however there may be a very few brands of wine that use different bags. These bags should also work fine, but may require removing the first glass or two of wine before placing in Boxxle. Thank you and enjoy.
