

HOW TO

- Have a partner to help you install the encasement. Installing an encasement alone can stress the zipper end stops on each side.
- Starting at the head of the bed, unzip the encasement and gather the fabric to locate the top two end corners of the encasement.
- Align the corners of the encasement with the corners of the mattress.
- Together with a partner, lift each side of the end of the mattress and rest it on the knee and begin to slide the encasement onto the mattress toward the bottom of the bed.
- Carefully slide the encasement, inch by inch, down the length of the mattress, avoiding stress on the zipper end stop.
- Zip the cover completely around the mattress and lock the “Zipper with the Hook”.
