

**Congrats on your purchase! Life is about to change.**

Here is why we're so happy for you. We all know that feeling way too well - when you've just lit your BBQ and after three minutes of cooking, oops, your propane tank is empty. You've taken the first step in ensuring that never happens again.

**Before you get started, here is what you'll need:**

- Your smartphone to download our free app
- 2 AA Batteries
- Your propane tank

**Ready?** Let's go!

### Step 1

Download our free app on either iTunes or Google play by searching for: "smart propane scale"

Note that for 20Lb tanks, readings are free.

If you have a 30Lb and/or 40Lb tank - you'll first receive a free trial, follow by an in-app purchase of \$1.99.

### Step 2

No need to worry about your Bluetooth device settings as our app will ensure your device is ready to go. In case the app shows a pop-up window asking permission to access Bluetooth, just tap on the - Allow button.

### Step 3

Turn on the Flame King Smart Propane Scale using the switch on the bottom. Ensure only 1 scale is on within close proximity.

### Step 4

Place your propane tank on the scale and then tap "Connect Scale" in the app.

### Step 5

Once your scale is connected, readings will show up instantly. We have also added a bonus feature to help you monitor your long-term propane consumption. To activate this feature, simply tap on the - Record Amount button.

All of your readings will be stored with a date stamp directly in the app so that way you'll never have to remember again what % your propane tank was the last time you used it. Cool, right?

### Friendly tip:

We recommend keeping the scale near your propane tank. Better yet, keep it stored under your tank. To save the battery life, make sure to turn the scale power off after each usage.
