Troubleshooting

Connection failed, Please check

a: Do not use Chinese for the WiFi name and password. Do not exceed 12 digits. Please use a combination of numbers and letters. 5G WiFi signals are not supported. Please use 2.4G WiFi signals.

b:The multi-level network leads to network restrictions, causing the water dispenser to fail to connect to the network server. c:Some software conflicts in the phone can also cause the connection to fail. Please restart the phone. Close the non-mobile phone system software that started with the mobile phone, turn on the mobile phone's Bluetooth and positioning, and then try to reconnect to the water dispenser

d:The drinking fountain is offline, please check the distance between the drinking fountain and the router at home, not more than 10 meters, and try not to divide the wall in between. According to WiFi characteristics, the WiFi signal of the partition wall will drop sharply, resulting in unstable connection and offline
e: There is no response when turn on the machiner, first check whether the power is plugged in and the power switch is turned on. If they are all plugged in, check whether the power supply is damaged, and contact customer service to purchase the power supply.

Tips:

- 1. Please replace the water filter within 30 days.
- 2. Please replace the water pump filter cotton wit hin 30 days.

 3. suggested to clean the water tank and water p
- ump filter cotton within 7 days
 4. electronic devices at the bottom of the water ta
- nk, please do not soak in water when cleaning
