

# Cordless wet/dry handheld vacuum

## Product parameters

Charging time:	Approximately 4 hours to full charge		
Rated power:	50W	Battery capacity:	3000mah
Working voltage:	7.4V	Product weight:	14 oz
Parts list:	Motor, flat tool, brush tool, hose adaptors, flexible hose, USB power connector, dust/liquid collection bin, one-way valve, removable filter.		

Please read the instructions carefully before use

## General Usage Instructions

1. Please ensure that the product is fully charged before first time use. Plug the USB into any USB charging block and the male plug into the tail end of the unit. The indicator light should turn from red to green when it is fully charged. The unit will charge only for as long as needed and will not overcharge. It may take up to 4 hours to charge.
2. The filter is washable; rinse the filter under a faucet to remove dirt and debris, wait until dry before reinstalling.
3. This machine is not a toy. This vacuum is suitable for persons age 12 and up only.
4. When fully charged, unit can run for approximately 30 minutes.

## WET/LIQUID handling

1. Please connect the flat tool before handling any liquid.
2. Make sure that the flat tool is pointing near vertically downward when vacuuming liquid.
3. Ensure that any liquid inside the dust/liquid bin does NOT exceed the "Full" line or else the motor can burn out. The unit can hold approximately 5 oz of liquid.
4. With the flat tool pointing towards the ground, carry the entire unit to the sink to open the collection bin and dispose of the liquid.
5. When handling liquid, do NOT operate the vacuum unless it is pointing downward (towards the ground). Please make sure that no water enters the motor or risk burning or shorting out the motor. The motor can withstand water vapors but cannot be immersed in liquid.

*When handling liquid, Do NOT operate or carry the vacuum more than 45° from pointing straight down towards the ground. This prevents liquid from getting into the motor.*
