

# ARCWAVE

## Ion

Introducing the world's first  
**Pleasure Air** stroker

## Using Ion

1. Turn Ion on before using. Ion will automatically start in Smart Silence™ mode. The Pleasure Air™ sensor will rumble quickly to indicate it is on. The “A” light at the bottom of the product will also turn on.
2. To use Ion, insert penis into the end with the “A” light facing towards the user.
3. Insert until the frenulum rests on the Pleasure Air™ sensor and hold in place for max intensity (as stimulation is on Pacinian receptors). Ion can also be used as a stroker, but the sensation won't be as intense.

## Cleaning and Drying

1. After using, Ion needs to be cleaned with soap & water, or a silicone-friendly toy cleaner like Arcwave Toy Cleaner by pjur. Ion itself is IPX7 waterproof. The storage base is not waterproof.
2. Twist to Open Ion by twisting the two parts (the CleanTech sleeve and the motorized device) away from each other. This will grant access to the inside for easy cleaning.
3. After cleaning, twist the parts back together. Towel dry lightly then place Ion into the storage base.
4. Ion has magnetic charging pins that need to be connected to the bottom of the storage base for it to begin charging. Make sure the storage base is plugged into a power source using the included micro-USB cable.
5. The storage base has a Drytech Pack and DryTech Stick that help to speed up the drying process using silica. The DryTech Pack is inside of the DryTech Stick.
6. When the pack is no longer absorbing moisture, it needs to be reset or replaced (time between reset or replacement depends on how much moisture it has been soaking recently). A pack can absorb enough moisture from x6 soaking wet Ions. Remove the pack by pulling on the base of the stick. To reset the pack, either blowdry until dry or place in the microwave for 10 mins.
