

How to Make Clear Ice

Hand wash with soap and water before use.

Silicone mold is dishwasher safe. Do not submerge outer case.

1. Fill the insulating outer case with water to the bottom of the fill line (about 2" from top).
2. Assemble the silicone mold and slowly insert it all the way into the case filled with water. Water should be overflowing into the depression containing the fill holes - so top off if necessary.
3. Place upright in freezer for 24-30 hours. Though time may vary depending on freezer settings, **do not exceed 30 hours of freezing time.**
4. To remove the silicone mold from the case, pull both silicone handles on **ONE SIDE** of the mold until the mold gives only slightly. Repeat this on the opposite side of the mold. Continue alternating sides until the mold fully releases from the case.
5. Separate the mold halves and serve or store for later!
