

Glowing Petals™ – USER MANUAL

Introducing Glowing Petals, a patented and revolutionary wreath adorned with solar-powered lights, eliminating the need for traditional batteries or power outlets. The integrated solar panel with rechargeable batteries charges in the sun. The intelligent sensor, built into the solar component, activates the lights as darkness falls and automatically turns them off at dawn, ensuring longer nightly illumination and free from interference from non-natural light sources.(Patent No. US-11754240-B2)

SHAPING INSTRUCTIONS:

Upon receipt, gently shape the wreath by carefully spreading out the branch tips and decorative add-ins. This process enhances the wreath's natural appearance, ensuring it reaches its advertised dimensions and becomes a beautifully crafted holiday decoration.

SOLAR COMPONENT INSTALLATION

*For Door Display:

1. Align the two grooves (see Figure 1) on the back panel of the solar component with the two small reverse hooks (see Figure 2) on the door hook provided (used for Door Display only) and secure the solar component to the door hook.

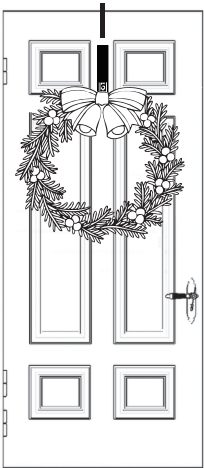

2. Position the door hook at the center of the top of the door and hang the wreath on the hook.

Figure 1

Figure 2

*For Window Display:

1. Peel the liner off one side of the Nano tape (Figure 3, used for Window Display only) and apply the tape to the back panel of the solar component (See Figure 4).

2. Insert the S hook (see Figure 5) into the hole at the bottom of the solar component.

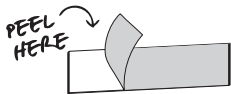

Figure 3

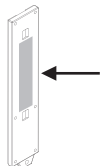

Figure 4

Figure 5

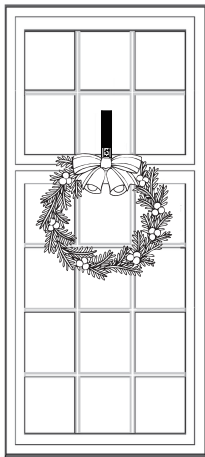

Figure 6

3. Hook the wreath onto the S hook. Determine the desired hanging location on the window and mark the position of the solar component (See Figure 6).

4. Remove the wreath, peel the remaining liner off the Nano tape and secure the solar component to the window.

5. Rehang the wreath on the S hook.

OPERATION

- 1.Pressing the red ON/OFF button once will turn the solar component on or off. The Power Indicator lights up when the power is ON. Leave the solar component on after hanging the wreath in position.

2. The Charging Indicator lights up when the solar component is exposed to sunlight.

3. As darkness falls, the lights turn on automatically, and the Light Indicator will be on.

4. Press the green Mode button to cycle through the three light functions: Fast Twinkling Mode, Breathing Mode, and Steady Warm White.
